

Functional Restrictions of UNIX Driver BW

Thank you for purchasing a Fuji Xerox product.

This document describes the printer-specific functional restrictions that are not described in other manuals.

The User Guide contained on the CD-ROM provides detailed information on other restrictions.

Linux Print System

For some OS such as TurboLinux 8, the standard print system has been changed from LPRng to CUPS (Common UNIX Printing System).

To use the UNIX driver, change the print system from CUPS to LPRng.

In the case of TurboLinux 8, the Companion CD1 that comes with it contains the LPRng package. Refer to the following web site and change CUPS to LPRng.
